Audrey Christabel Tjokro

New York, NY | 425-599-8927 | act245@cornell.edu | Website

Education

Cornell University, New York, NY **2024 — 2026**
Dual Master of Science Degrees in Applied Information Science and Engineering
Health Tech Concentration **|** GPA: 3.8

University of Washington, Seattle, WA **2016 — 2020**
Bachelor of Business Administration in Information Systems and Marketing

Technical Skills

Languages:	Python, Java, C, C++, JavaScript, SQL, R, HTML, CSS
ML/CV/NLP:	TensorFlow, PyTorch, OpenCV, NumPy, Pandas, Transformers, Triton
Data & Integrations:	Redshift, PostgreSQL, AWS S3, REST APIs, OAuth, ETL Pipelines
Tools:	Git, Jira, Confluence, React, Postman, cURL

Experience

Flywheel Digital, Technical Product Engineer, New York, NY **2021 — Present**

- Own L2/L3 technical investigations for a remote SaaS platform, managing 40 Jira tickets/week, with peaks to 60 during incidents/releases, consistently meeting 95% SLA; troubleshoot requests via Jira and Slack by reproducing issues, running SQL investigations, and analyzing internal logs.
- Served as the primary technical contact for client-reported integration and data issues, diagnosing failures across AWS S3, Redshift, and ETL pipelines end-to-end, then translating root cause findings and remediation timelines directly back to clients in plain language to maintain trust during active incidents.
- Debug production issues across APIs, data flows, authentication, reporting logic, and platform behavior; write high-signal escalation packets, triage templates, runbooks, and 2–3 knowledge articles/month to improve handoff quality, reduce back-and-forth, and increase self-serve + AI-assistant answer accuracy.

Cornell Tech, Graduate Student Researcher (AI/ML), New York, NY **2025 — Present**

- Built AI-driven research workflows across VLMs, robotics, and sensor-based perception, translating open-ended research questions into repeatable data collection, evaluation, and debugging processes.
- Developed an automated Python + Gemini VLM workflow that transformed robot interaction videos into timestamped behavioral labels, reducing manual annotation workload by 70% across 10K+ frames.
- Built Python tooling for multimodal sensor ingestion, preprocessing, experiment tracking, and reproducible evaluation across repeated robotic sensing experiments.

Projects

Adversarial Red-Teaming of Clinical LLMs via RLHF | Paper **2026**

- Developed a clinical LLM red-teaming framework comparing PPO vs. DPO to test how RLHF design choices affect safety behavior under adversarial conversations.
- Implemented evaluation metrics including attack success rate and turns-to-failure; showed that all-turns credit assignment improved robustness compared with the DPO baseline.

Enhancing VLMs for Camera and Scene Understanding | Paper **2025**

- Built a VLM evaluation pipeline using CameraBench and structured multimodal prompts (in-context learning) to test whether video models understand camera motion and 3D scene consistency.
- Designed in-context prompting experiments across pan/tilt/zoom/parallax/dolly motion and produced reusable prompts, evaluation artifacts, and benchmark results.
